

SERVICE BULLETIN

WORLDLAWN POWER EQUIPMENT, INC.

Bulletin Number: SB1203

Date: 7/06/2012

To: Distributors and Dealers:

Model: WYZ48/52/60 Cobra units

Subject: Field replacement of “old-style” fuel tanks with “new-style” fuel tanks on the Worldlawn Cobra units 48/52/60.

Course of Action:

Over the past few months we have been in the process of replacing the fuel tanks on Cobra units, first distributor floor inventory and then dealer floor inventory. A number of units have had the tanks switched out during routine service.

We would like to complete this project by replacing remaining customer field inventory.

This is a **mandatory** update and includes **all** of the 48/52/60 Cobra units regardless of performance, 2008 through current models, which haven't been replaced yet.

Please contact all remaining customers who own units which still have the “old style” tanks.

Please contact your distributor with this information and also provide them with the **13 digit serial number for each unit**. This full serial number is important due to the shut-off valve design change. 2008 and 2009 units should have the shut-off valves located on the tanks and the 2010 to current units will have them located on the console by the footplate. Please attempt to stay with the original design if at all possible.

If the unit is 2011 or newer, there is a possibility that it may be an EPA unit. In this case the “old-style” EPA tank will have to be replaced by a “new-style” EPA tank. The vent valve will be located on top of the tank back by the fuel cap in this case.

This is not an EPA update. Older units which are non-EPA, will remain non-EPA, because they were manufactured before the EPA guidelines came into effect.

Once we have received all pertinent information from your distributor, we will drop-ship the tanks, new control panels, and all hardware needed to you the dealer free of charge. Please fill out a “Warranty Claim Form” for each machine as it comes in for the change-over. You will be reimbursed 1 hour of labor at your current shop labor rate. **IMPORTANT: Please note the full 13-digit serial number of each machine in the space provided on your claim form.** (See attached for reference information.)

“OLD-STYLE” TANK

**“NEW-STYLE” TANK WITH 90 DEGREE CONNECTOR AT BOTTOM OF TANK (3-WAY VALVE ON CONSOLE BY FOOTPLATE)
Replaces 2010 THRU CURRENT MODELS
*If the unit already has this new tank design, it is complete.**

“NEW-STYLE” TANK WITH VALVE ON BOTTOM OF TANK-Replaces 2008 THRU 2009 models. Attempt to replace all units with their original valve design.

**(TANK VALVE)
This is the Encore version of the valve-the existing Worldlawn design of the valve is slightly different.**
